Keep that pool cool and save

Learn how high efficiency systems can help you enjoy your pool and increase your energy savings.

If you have a swimming pool, chances are you have a higher-than-average energy bill. Let us help you with a high-efficiency pool pump. Our **\$250** high-efficiency pool pump incentive can help.

HOW TO RECEIVE AN INCENTIVE:

Find a contractor that's right for you

A participating Independent Contractor (PIC) can install a new high-efficiency pool pump to meet incentive requirements. Your \$250 instant incentive will appear as a credit on the invoice your PIC provides. Visit GulfPower.com/partner/contractor/contacts.html to find a PIC.

Can I install a high-efficiency pool pump myself and qualify for an incentive?

Yes! Should you choose to install the high-efficiency pool pump yourself – you will need to meet all requirements and apply online at GulfPower.com/save/programs/pool-pumps.html to request the incentive. This option does not provide an instant incentive.

A pool provides summertime fun but can also drive up your energy use and lead to higher energy bills. See if you qualify for a \$250 incentive to upgrade to a high-efficiency pool pump and start saving.

Requirements to apply:

- » Reside in a single-family home; must have an in-ground pool
- » Pool pump must be new, operational and either two-speed or variable-speed
- » Provide access to your pool equipment for Gulf Power Company or a Gulf Power Company Participating Independent Contractor (PIC) to determine incentive eligibility
